

Product Lifecycle Management

From concept to delivery, all inside Microsoft Dynamics 365 Business Central.

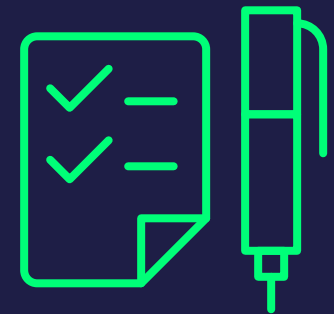

Plan seasonal collections, manage private-label orders, and keep production on schedule inside Microsoft Dynamics 365 Business Central.

K3 Pebblestone PLM gives fashion and lifestyle brands a shared, structured plan for every step of product development.

From the first sketch to the final delivery, your teams can plan, track and deliver on time, without the spreadsheets or third-party tools.

Key capabilities:

Milestone-based planning using templates.

Forward and backward scheduling from planned starting or ending dates.

Item- and collection-level planning for seasonal and NOOS product lines.

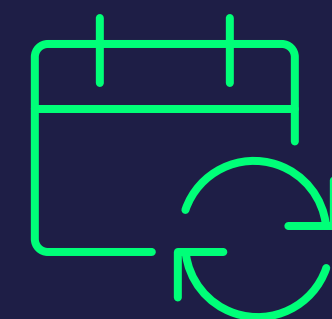

Cross-team and vendor assignment for clear ownership.

Order-level planning for sales orders and purchase orders.

Automatic notifications for upcoming and overdue tasks.

Live status tracking through personal and team activity worksheets.

- Users can view and update their own tasks.
- Managers can monitor team progress, spot delays and reassign as needed.

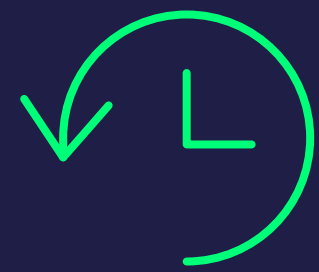

Structured planning that keeps you on track

Replace disconnected workflows with structured plans everyone can follow. Define clear timelines for each product, phase, and task, while keeping teams aligned, proactive and on schedule.

Key aspects:

Track real-time status across all phases and activity lines via the PLM worksheet.

Alerts warn before deadlines slip so you can act in time.

Use ready-made templates to build timelines for each collection or order-specific workflows.

Plan forward from a planned starting point or backward from your target ready date.

Plan by collection, sales order, or purchase order

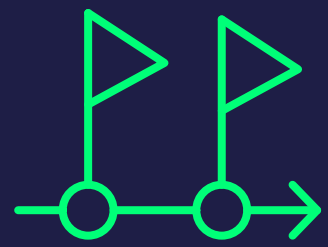

Plan the way your business runs. Whether it's a seasonal collection or a single customer order, create milestones and responsibilities that match your workflows.

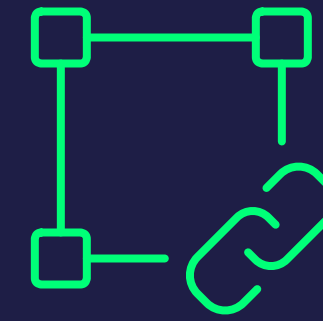

Key aspects:

Create plans for collections, customer-specific lines, or individual orders.

Tailor milestones to each scenario, from fittings to approvals.

Link activities to owners for clear accountability throughout the whole process.

Keep everyone aligned with one shared plan inside Business Central.

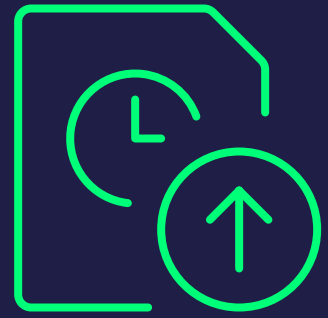

Keep teams on the same page

PLM connects design, development, sourcing and production in one shared view. Everyone knows what's due, who's responsible, and where things stand.

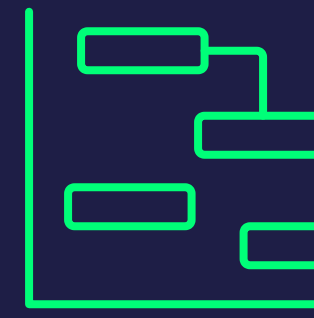

Key aspects:

Track approvals, fittings, samples, and changes in one place.

Assign activities across internal teams (design, product development, planning, sourcing) and external suppliers.

Reduce chasing and follow-ups with clear timelines and task visibility.

Stay ahead of delays

Spot issues before they cause disruption. Built-in alerts and progress tracking surface risks early so teams can re-plan and recover without losing time or margin.

Key aspects:

Track progress across phases and spot potential risks early.

Automatic reminders highlight upcoming deadlines and missed tasks for internal teams and external suppliers.

Reduce last-minute rush costs and keep your seasons more predictable.

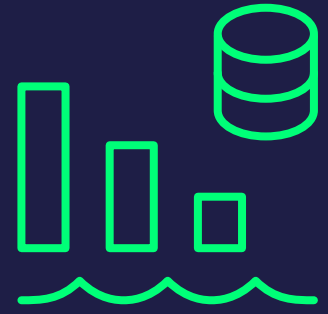

Embedded in Business Central

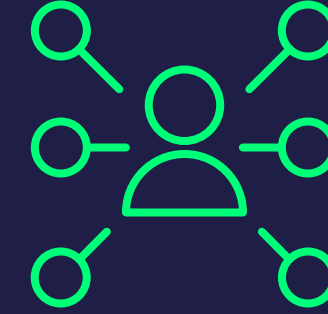

No external tools, no duplicate entry. Keep your PLM data safely with your ERP data, including plans, milestones and orders, so that updates flow through automatically to everyone while minimising the risk of duplicate data.

Key aspects:

Plans, milestones, sales orders and purchase orders live alongside your ERP data, meaning no duplicate data and no brittle integrations.

Everything stays connected so changes flow through to the people who need to know.

Who benefits?

Design and product development

Track samples, approvals and timelines; spend more time designing and less time chasing updates.

Production and sourcing

Assign vendor tasks with clear dates; improve supplier collaboration and reduce disputes.

Planning and merchandising

Build structured timelines; see which collections are on track and act before issues escalate.

Management

Gain top-down visibility by viewing activity lines by team, department, or employee to spot delays, monitor progress and step in early to protect margins.

K3 Fashion Solutions, a leading supplier of fashion business technology with more than 30 years of experience, develops industry-specific tools to support fashion workflows, improve customer experiences, and deliver sustainable growth throughout the supply chain.

Our solutions, K3 Fashion and K3 Pebblestone, are fully embedded in Microsoft's Dynamics 365 ERPs offering enterprise-grade support from design and production through to retail. As a top 20 GISV with a global footprint delivered through our network of Microsoft implementation partners, we are committed to supporting brands of all sizes.
