

Cargo Management

K3 Pebblestone's Cargo Management enables businesses to effortlessly oversee, manage and distribute their cargo to warehouses with simple-to-use features. Fashion companies can seamlessly access critical information about vendors, transport routes, dates and other essential documentation to ensure they have everything needed to operate without hassle. K3 Pebblestone's fashion-specific functionality for inventory and warehouse management streamlines processes, improves visibility, and enables efficient tracking of goods throughout the supply chain.

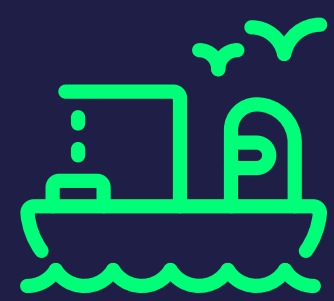

Key aspects include:

Cargo Documents

Adopting digital cargo documents and packages streamlines transportation, improves tracking, reduces paperwork, and enhances visibility for smoother supply chain operations.

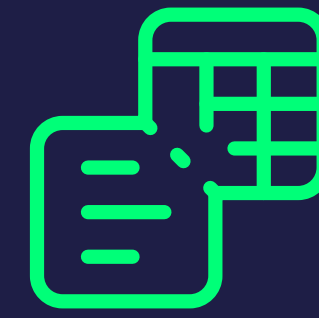

Receiving Cargo Documents

Cargo document receipts can be recorded directly on the document or through the receipt worksheet in K3 Pebblestone. This efficient documentation process enables proper tracking and control of received goods.

Goods Ownership

Goods in the fashion industry are often manufactured in other countries and transported to the warehouse. When the goods are ready for loading onto a vessel, the wholesale company becomes the owner. K3 Pebblestone accurately reflects this ownership in the inventory system to ensure stock level precision.

Import Functionality

K3 Pebblestone offers an import functionality for importing item information from vendors. This streamlines the process of updating inventory data and ensures accurate tracking of incoming items.

Item Supply Overview

The item supply overview in K3 Pebblestone provides a comprehensive view of incoming items, including details from Purchase Orders, production orders, transfer orders, cargo documents, and packages. This overview, along with delivery dates, estimated time of departure (ETD), and estimated time of arrival (ETA), facilitates effective inventory planning and management.

K3 Fashion Solutions, a leading supplier of fashion business technology with more than 30 years of experience, develops industry-specific tools to support fashion workflows, improve customer experiences, and deliver sustainable growth throughout the supply chain.

Our solutions, K3 Fashion and K3 Pebblestone, are fully embedded in Microsoft's Dynamics 365 ERPs offering enterprise-grade support from design and production through to retail.
