K3 Pebblestone

Product Readiness

K3 Pebblestone ensures product readiness by providing seamless onboarding, engaging tours, interactive learning, and continuous improvement. All these tools help to empower users with the necessary knowledge to ensure smooth transition and efficient usage.

Key aspects include:

Assisted Setup
Streamlined onboarding experience for seamless implementation.

Demo Videos
A showcase for product capabilities, delivered with finesse.

Online Academy
Interactive learning platform for partners and end users.

Topic Guides
Unravelling complex concepts and providing in-depth knowledge.

Release Notes
Chronicling software evolution, unveiling new features and enhancements.

Features and Benefits:

Assisted Setup
K3 Pebblestone's assisted setup wizard offers practical step-by-step instructions to simplify the initial configuration process.
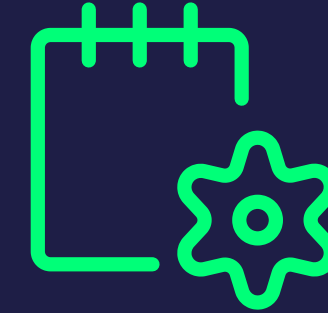

Demo Videos
K3 Pebblestone is supported by numerous demo videos that serve as useful content to showcase the solution's powerful functionality with visual walkthroughs.
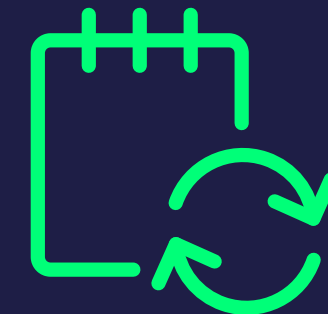

Online Academy
K3 Pebblestone's online academy effectively captures work processes and transforms them into engaging learning content for users and partners.

Technical Release Notes
K3 Pebblestone's developers provide technical release notes for each new application or functional area to ensure timely communication of new information.

Functional Release Notes
K3 Pebblestone's functional release notes keep users informed about all the latest updates and enhancements made within the solution.

Topic Guides
K3 Pebblestone's topic guides empower users with insightful resources that provide comprehensive information, step-by-step instructions and best practices.
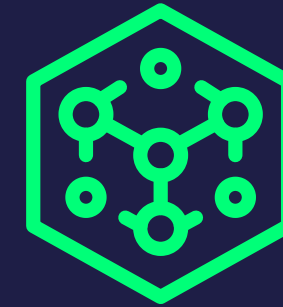

Additional Functionality:

Landed Cost

K3 Landed Cost is built on top of Dynamics 365 Business Central, which K3 Pebblestone expands upon with additional functionality built specifically for fashion wholesale. Since K3 Landed Cost sits on top of K3 Pebblestone, fashion companies can easily use the functionality to calculate their landed costs. With K3 Landed Cost, companies can effectively manage and analyse pricing strategies, cost calculations, margins, discounts, and other crucial aspects related to the pricing and costing in the dynamic fashion industry, ensuring optimal profitability and competitiveness.

• Calculation: Effortlessly calculate predefined cost elements for multiple items based on vendor, country of origin, and minimum quantity. Easily attach multiple item calculation sheets to a single item and set up currency rates for vendors using different currencies to ensure accurate calculations.

• Costing: Define and incorporate numerous cost elements in the Landed Cost functionality. Set up wholesale and retail margins through these cost elements to accurately calculate and analyse landed costs. This enables comprehensive financial visibility and profitability management in the fashion industry.

K3 Omnichannel Platform

The K3 Omnichannel Platform empowers businesses to leverage incoming data from different suppliers or systems. The process involves identifying the unique data mapping requirements of the business alongside their must-have features before integrating them with APIs.

K3 Pebblestone encompasses comprehensive functionalities for Retail & Commerce management within D365 Business Central. In addition to wholesale, it seamlessly integrates with various other channels.

• REST APIs: Effortlessly utilise REST APIs to connect with K3 Pebblestone and build upon the existing D365 Business Central REST APIs.

• Standard B2C Shopify webshop: The standard B2C Shopify webshop is available in both K3 Pebblestone and D365 Business Central to facilitate seamless integration between the eCommerce platform and ERP system, enabling real-time data synchronisation, efficient order processing, streamlined inventory management, and enhanced customer management capabilities.

Additional Functionality:
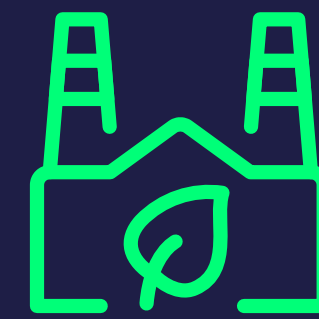

Corporate Social Responsibility
To promote environmental sustainability in the fashion industry, a robust solution supporting Corporate Social Responsibility (CSR) goals is crucial. K3 Pebblestone's CSR module offers comprehensive classifications, certificates, and documentation for products, raw materials, and vendors, empowering businesses to make informed decisions based on ethical and sustainable criteria.

Sustainability
K3 Pebblestone offers robust functionalities for sustainability management within D365 Business Central. This encompasses tools and features designed to help businesses monitor and optimise their environmental impact, promote sustainable practices, track resource usage, manage waste, and comply with regulatory requirements. With K3 Pebblestone, companies can seamlessly integrate sustainability goals and practices into their operations and decision-making processes.
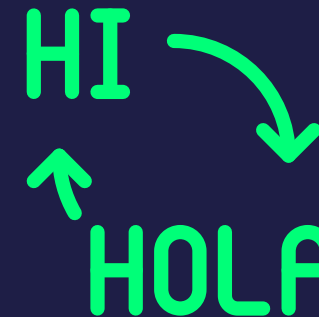

Mobile WMS Connector
K3 Pebblestone's Mobile WMS Connector, based on Microsoft Dynamics 365 Business Central and Tasklet Factory, is specifically built for businesses operating in the fashion and apparel industry. The Mobile WMS Connector effortlessly supports specific K3 Pebblestone functionalities to help optimise warehouse accuracy, efficiency and processes.

The Inventory and Warehouse Management features included with the Mobile WMS Connector offers fashion-specific functionality to enable businesses to easily add colour and size information to inventory and warehouse management processes.

Translations
K3 Pebblestone is designed to support businesses all over the world. To ensure this aim is met, the solution has been translated into the following languages: English, Dutch, French, Italian, Danish, German, Swedish, and Spanish.

K3 Fashion Solutions, a leading supplier of fashion business technology with more than 30 years of experience, develops industry-specific tools to support fashion workflows, improve customer experiences, and deliver sustainable growth throughout the supply chain.
